People & Technology
THE VALUE OF HUMAN FACTOR

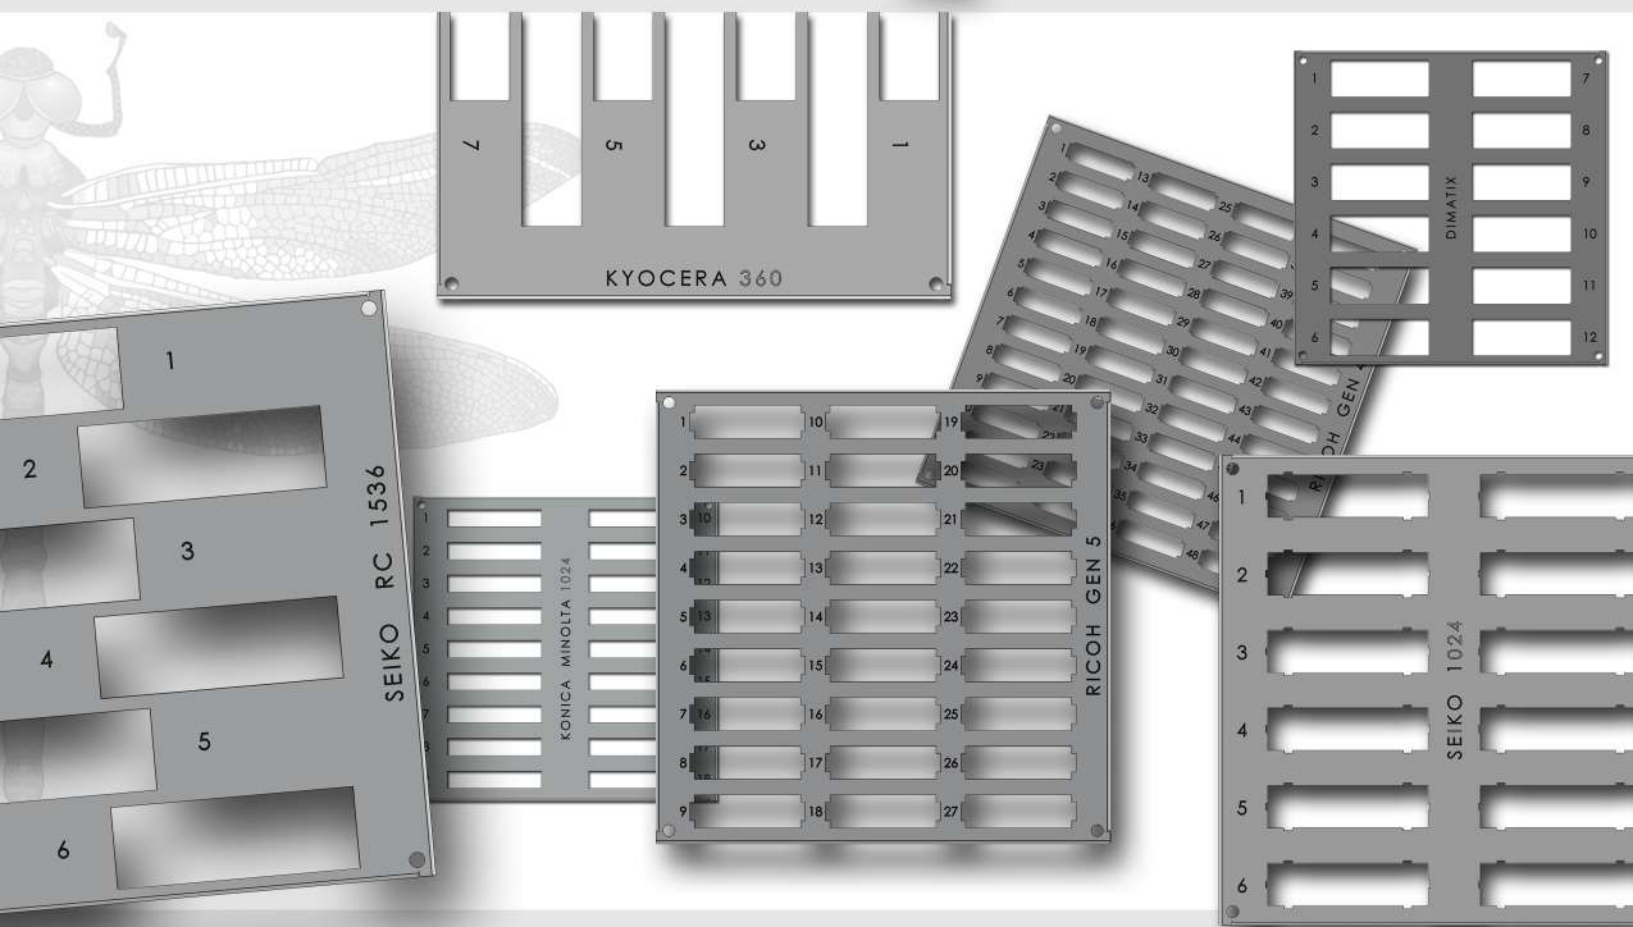

**CRIBHEADS is a multifunction machine,
for the maintenance and prewash of INKJET heads**

MAIN FEATURES

- Compatible with the main manufacturers of INKJET industrial heads:
SEIKO, XAAR, DIMATIX, TOSHIBA, KONICA MINOLTA, RICOH, KYOCERA, DURST and others.
- Different head brands and models can be mixed within CRIBHEADS.
- It is possible to work with up to two different cleaning fluids at the same time.
- 3 standard programs are available and up to 8 user-created work modes can also be configured.
- Extremely quick and easy cleaning fluid change.
- Ready to connect forced ventilation, if your cleaning fluid requires it.
- WITHOUT MAINTENANCE.
- AUTO INSTALLABLE by the user, with manual in 3D video format.
- Graphical and intuitive interface that eliminates the language barrier.

CRIBHEADS single device, multiple tasks

PRE-WASH: As an aid to head cleaning, in collaboration with CLEANJECTOR. CRIBHEADS performs a pre-wash of the heads intended to be cleaned with CLEANJECTOR. In this way, the cleaning process is accelerated and in some specific symptoms, such as micro scratches, better final results will be obtained.

MAINTENANCE: As maintenance of the heads used with water-based ink, while they are not being used. CRIBHEADS saves you thousands of euros on printheads and will also avoid long production stops, caused by dry ink on the nozzle plate.

CRIBHEADS takes care of your heads delicately and safely, while ensuring they are always ready for use at any time, when they are needed.
